

NETWORKS AND DISTRIBUTED SYSTEMS LAB

Presse

The Networks and Distributed Systems (NetSys) Lab at OVGU Magdeburg, headed by Prof. Dr. David Hausheer, has been established in the Faculty of Computer Science in May 2017.

The NetSys Lab is active in several networked and distributed systems research areas, including software-defined networking, network functions virtualization, peer-to-peer and overlay networks, as well as network security and related economic aspects. At this stage, the group's major focus is on secure and economic management of networking resources in fixed and mobile network infrastructures.
